OPENSEC STUDIO V1.10.10 OFFICIAL RELEASE

Official Illustrated Guide to OpenSec Studio

The Cybersecurity, Web Audit & DevSecOps Suite Explained for Everyone

CREATOR & LEAD SOFTWARE ARCHITECT

el saghet

OCTOBER 2026

OpenSec Security Engineering

📚 Table of Contents

1. 📖 **Prologue: The Great Internet Village**
2. **Capítulo 1:** First Flight & Screen Anatomy
3. **Capítulo 2:** The Dashboard Control Panel
4. **Capítulo 3:** The Customs Officer (HTTP Interceptor & HTTPS Tunnels)
5. **Capítulo 4:** The Captain's Logbook (HTTP History)
6. **Capítulo 5:** The Magic Photocopier (Native Rust Repeater)
7. **Capítulo 6:** The Key-Testing Robot (Intruder)
8. **Capítulo 7:** The Live Security Inspector (DAST Scanner & YAML Templates)
9. **Capítulo 8:** The Door Knocker & Locksmith (Port Scanner & SSH Audit)
10. **Capítulo 9:** The Magic Recipe Book (Nuclei-Style YAML Templates)
11. **Capítulo 10:** The Universal Translator (Decoder)
12. **Capítulo 11:** The Building Materials Inspector (Live SCA Audit)
13. **Capítulo 12:** The Treasure Map (SiteMap & JS Spider)
14. **Capítulo 13:** The Spy Postman (OAST Collaborator Client)
15. **Capítulo 14:** The Time Machine & the Judge (Diffing & PCI-DSS Audit)
16. **Capítulo 15:** The Great Secret Encyclopedia (Offline CVE Feeds)
17. **Capítulo 16:** The Secret Mission Safe (.opensec Projects)
18. **Capítulo 17:** The Extension & Tool Store (BApp Community Store)
19. **Capítulo 18:** SSL Certificates, 60-Day Trial, $30 BTC Donation & Credits

📖 Prologue: The Great Internet Village

> **🏘️ The metaphor of letters and shops**
>
> Imagine that the **Internet** is a bustling village full of houses and shops:
>
> - **Your Web Browser:** You walking down the high street asking for things.
> - **The Web Server:** A shop attended by shopkeepers behind the counter.
> - **An HTTP Request:** A handwritten letter you send saying: *"Please show me the toy catalog"*.
> - **An HTTP Response:** The parcel the shop returns containing what you asked for.

What is OpenSec Studio?

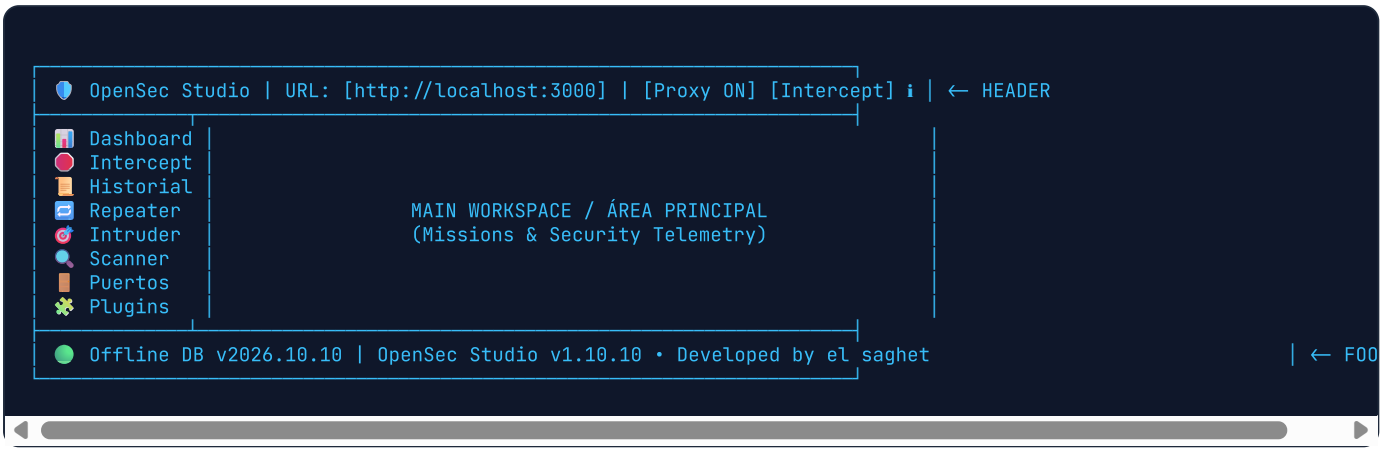

It is your **magic detective backpack** crafted by **el saghet**. Inside it, you carry tools to intercept letters mid-air (Interceptor), duplicate and send them a thousand times (Repeater), test key combinations (Intruder), check castle gates (DAK Scanner & Port Scanner), audit server configurations (SSH Host Audit), and consult a secret encyclopedia with over 1,200 threats even on airplane mode (Offline Feed).

> **🌟 Fundamental Principle: 100% Real, Zero Mock Data**
>
> In OpenSec Studio no button is a placeholder or mock simulation. Every single action executes native Rust code, communicates over live network sockets, and processes authentic packets.

Capítulo 1: First Flight & Screen Anatomy

Go to your Windows Desktop or root folder and double-click `OpenSec Studio.exe`. The window opens instantly, hardware-accelerated and in focus.

Visual Interface Anatomy:

Section	Function in OpenSec Studio	Metaphor to understand it
1. Header (Top Bar)	Quick controls: Target URL, Proxy ON/OFF toggle, Intercept state, and About info (ℹ️).	The steering wheel and dashboard switches.
2. Sidebar (Navigation)	Instant navigation across all 18 cybersecurity modules.	Your organized tool rack.
3. Central Workspace	Displays code editors, traffic grids, metrics, charts, and audit findings.	Your detective workbench and lab.

> 🕵️ **Detective Mission 1: The Official Badge**
>
> Click the ℹ️ button in the top right corner. The official modal will display version **v1.10.10** and credits to **el saghet**.

Capítulo 2: The Dashboard Control Panel

The Dashboard brings together all live audit telemetry in real-time.

> 🚗 **Speedometer and Gauges**
>
> Just like the cockpit of a sports car, it indicates network speed, engine status, and immediate road hazards.

Section	Function in OpenSec Studio	Metaphor to understand it
Total Requests	Cumulative count of inspected network traffic.	Total miles driven.
Critical Vulnerabilities	Red flashing alert for severe flaws needing immediate fixes.	Check-engine warning light.
Security Score	Global percentage security posture of the target.	Vehicle overall health status.

> 🕵️ **Detective Mission 2: Engage the Radar**
>
> Click the primary Proxy switch. Notice the status transition from "Paused" to vibrant green "Active".

Capítulo 3: The Customs Officer (HTTP Interceptor & HTTPS Tunnels)

The Interceptor sits between your browser and the remote server to inspect packets before transmission.

> 🔴 **The customs inspector with a clipboard**
>
> Before a letter travels, the guard catches it mid-air. You can read it, edit contents with a pencil, and decide whether to Forward or Drop it.

Section	Function in OpenSec Studio	Metaphor to understand it
Intercept is ON / OFF	Enables or pauses the mandatory packet inspection halt.	Lowering or raising the tollgate barrier.
Forward (Proceed)	Sends the edited letter onwards to the destination server.	Waving the inspected vehicle through.
Drop (Discard)	Terminates transmission and closes the socket connection.	Confiscating and destroying suspect cargo.

> 🕵️ **Detective Mission 3: Edit a Message in Mid-Air**
>
> Enable interception, submit a form in your browser, alter a field value inside OpenSec, and click Forward.

Capítulo 4: The Captain's Logbook (HTTP History)

Immutably captures every single request and response processed through OpenSec Studio.

> 📜 **The royal archivist ledger**
>
> Every letter sent is logged with timestamp, HTTP method, URL, payload size, and color-coded status codes.

Section	Function in OpenSec Studio	Metaphor to understand it
200 OK (Green)	The shop fulfilled the order smoothly.	Successful package delivery.
404 / 403 (Amber)	Resource missing or door locked.	Missing address or restricted room.
500 Error (Red)	Server suffered an internal failure.	Kitchen fire in the shop backroom.

> 🕵️ **Detective Mission 4: Filter Sensitive Traffic**
>
> Type "/api" in the History filter bar to immediately isolate backend web service endpoints.

Capítulo 5: The Magic Photocopier (Native Rust Repeater)

Dispatches authentic HTTP requests via native Rust sockets with millisecond latency calculation.

> 🔁 **The instant cloning machine**
>
> Instead of retyping a web form 100 times, the copier allows modifying a single header or parameter and firing it instantly.

Section	Function in OpenSec Studio	Metaphor to understand it
Multi-Tab Workspace	Enables concurrent work on multiple endpoints.	Multiple open sheets on your desk.
Send Button	Fires the raw request over the native Rust engine.	Pushing the copier start button.
Split-View Viewer	Displays request on the left and response on the right.	Side-by-side letter comparison.

🕵️ **Detective Mission 5: Hidden Header Inspection**

Send a request to your test endpoint and observe the exact millisecond round-trip time in the response tab.

Capítulo 6: The Key-Testing Robot (Intruder)

Automated fuzzing and dictionary brute-force engine capable of high-throughput concurrent payload delivery.

> **The high-speed locksmith automaton**
>
> Given a padlock and a sack of 1,000 keys, the robot tests every key in split seconds and flags which one unlocked the door.

Section	Function in OpenSec Studio	Metaphor to understand it
Markers §payload§	Marks the injection positions in the request template.	Drawing a red cross where the key inserts.
Sniper Mode	Tests the wordlist against one position at a time.	A sharpshooter targeting one spot.
Cluster Bomb Mode	Tests all combinations of usernames and passwords.	Testing every key against every lock.

Detective Mission 6: Discover Hidden Endpoints

Configure a wordlist attack with paths (admin, backup, login) and look for differing response status codes.

Capítulo 7: The Live Security Inspector (DAST Scanner & YAML Templates)

Dynamic application vulnerability scanning detecting OWASP Top 10, SQLi, and Cross-Site Scripting.

> 🔍 **The bloodhound with a magnifying glass**
>
> The inspector checks every wall, window, and padlock searching for vulnerabilities the builders forgot to secure.

Section	Function in OpenSec Studio	Metaphor to understand it
Passive Scan	Analyzes headers and responses without aggressive injection.	Inspecting from the sidewalk without touching.
Active Scan	Sends targeted security payloads to confirm vulnerabilities.	Gently rattling the window to check its lock.
SARIF & HTML Export	Generates OASIS-compliant reports for engineering teams.	The signed official detective verdict.

> 🕵️ **Detective Mission 7: Security Headers Audit**
>
> Launch a passive scan against localhost and notice missing Content-Security-Policy (CSP) detections.

Capítulo 8: The Door Knocker & Locksmith (Port Scanner & SSH Audit)

Scans all 65,535 TCP ports with asynchronous sockets and executes credentialed SSH host compliance checks.

> 🚪 **Knocking on every door in the palace**
>
> Verifies which doors are open (80 HTTP, 443 HTTPS, 22 SSH) and identifies which service guards each gate.

Section	Function in OpenSec Studio	Metaphor to understand it
Concurrent TCP Scan	High-speed port probe written in native Rust.	A team of messengers ringing bells together.
SSH Host Audit	Evaluates Linux/Windows configurations against CIS Benchmarks.	Auditing the inner steel vault fortifications.

> 🕵️ **Detective Mission 8: Discover Open Web Ports**
>
> Run a port scan against 127.0.0.1 for ports 80–8088 and watch live discovered services populate.

Capítulo 9: The Magic Recipe Book (Nuclei-Style YAML Templates)

Create custom vulnerability detection rules using industry-standard declarative YAML syntax.

> 📜 **The book of magical recipes**
>
> Each template is a cooking recipe: it specifies what request to send and what string confirms a flaw.

Section	Function in OpenSec Studio	Metaphor to understand it
Syntax-Highlighted Editor	Live template editing with real-time parser validation.	Writing spells with enchanted ink.
Matchers & Extractors	Pattern matching rules using strings or regular expressions.	The secret ingredient revealing the trap.

> 🕵️ **Detective Mission 9: Build a Custom Rule**
>
> Create a YAML template to detect exposed /.git/HEAD files and validate it in the live syntax checker.

Capítulo 10: The Universal Translator (Decoder)

Transforms text and payloads across multiple encodings: Base64, URL Encode, Hex, HTML entities, and Hashes.

> 🔑 **The detective Rosetta stone**
>
> Spies often encode messages so others cannot read them. The translator renders them instantly understandable.

Section	Function in OpenSec Studio	Metaphor to understand it
URL Encoding (%20)	Encodes spaces and special characters for web safety.	Packaging words safely for postal transit.
Base64 & Hex	Translates binary data into readable character strings.	Translating secret glyphs into known letters.
SHA-256 / MD5 Hashes	Generates irreversible cryptographic fingerprints.	The unique biometric fingerprint of a letter.

> 🕵️ **Detective Mission 10: Decode a Base64 Token**
>
> Paste a Base64 string into the input pane, choose "Decode as Base64", and inspect the decoded cleartext output.

Capítulo 11: The Building Materials Inspector (Live SCA Audit)

Analyzes software dependency manifests (package.json) to detect outdated or compromised packages.

> 🧱 **The brick and beam inspector**
>
> Checks whether building materials have known flaws or factory recalls.

Section	Function in OpenSec Studio	Metaphor to understand it
Library CVE Correlation	Cross-references package versions with CVE databases.	Consulting the catalog of recalled materials.
Remediation Advice	Identifies the minimum secure version required.	The architect order to replace a cracked beam.

> 🕵️ **Detective Mission 11: Audit a Dependency Manifest**
>
> Load a package.json file into the SCA module and inspect the list of flagged component vulnerabilities.

Capítulo 12: The Treasure Map (SiteMap & JS Spider)

Builds a hierarchical tree of target endpoints through passive traffic inspection and client JavaScript parsing.

> 🗺️ **The cartographer map of the realm**
>
> As you navigate, the cartographer charts every alleyway, storefront, and secret door discovered.

Section	Function in OpenSec Studio	Metaphor to understand it
Hierarchical Tree	Groups endpoints by host, directory, and file name.	Branches of a family tree.
Passive JS Route Extractor	Discovers hidden API routes inside frontend JavaScript scripts.	Uncovering secret notes written by the builders.

> 🕵️ **Detective Mission 12: Explore Server Structure**
>
> Browse through a web app with the proxy on and observe how the SiteMap automatically constructs the directory layout.

Capítulo 13: The Spy Postman (OAST Collaborator Client)

Out-of-Band testing client detecting blind vulnerabilities (Blind SSRF, Log4Shell, Out-of-Band SQLi).

> 🔔 **The trap with a secret bell**
>
> You leave a letter containing a secret return address. If the server accesses it, the bell rings and you confirm the flaw.

Section	Function in OpenSec Studio	Metaphor to understand it
Unique Domain Generator	Generates correlation IDs for payload tracking.	The secret serial number on the trap.
DNS & HTTP Interaction Log	Shows when and from which IP the server visited the payload.	The bell alerting you when the trap was sprung.

> 🕵️ **Detective Mission 13: Deploy an OAST Trap**
>
> Generate a collaborator payload and watch incoming DNS/HTTP interactions appear in real-time.

Capítulo 14: The Time Machine & the Judge (Diffing & PCI-DSS Audit)

Compares previous audit scans with new runs to track fixed versus persistent flaws and calculates regulatory compliance.

> ⚖️ **The scales of justice and the time capsule**
>
> Compares yesterday photograph with today to reward fixed flaws and flag new regressions.

Section	Function in OpenSec Studio	Metaphor to understand it
Vulnerability Diffing	Categorizes flaws as Fixed, New, or Persistent.	The checklist of completed and outstanding tasks.
PCI-DSS v4.0 Compliance	Computes overall banking industry security adherence.	The official test score from the regulatory judge.

> 🕵️ **Detective Mission 14: Compare Two Scans**
>
> Load two prior scan files and inspect how the diffing engine highlights resolved vulnerabilities in green.

Capítulo 15: The Great Secret Encyclopedia (Offline CVE Feeds)

Offline database of 1,200+ threats searchable in under 5 ms without requiring any active internet connection.

> 📖 **The secret encyclopedia in your backpack**
>
> A comprehensive handbook of digital villain tactics accessible inside air-gapped bunkers or during airplane flights.

Section	Function in OpenSec Studio	Metaphor to understand it
Sub-5ms Search Engine	Optimized in-memory indexing for instantaneous querying.	Opening the book directly to the target page.
Automatic Delta Sync	Updates new CVE definitions when connected to the internet.	The courier delivering new volumes to your library.

> 🕵️ **Detective Mission 15: Search for a Critical Threat**
>
> Search for "Log4Shell" or "Spring4Shell" to read attack vectors and remediation code snippets.

Capítulo 16: The Secret Mission Safe (.opensec Projects)

Saves and restores complete investigations encrypted with AES-256-GCM and PBKDF2 key derivation.

> 🔒 **The armored detective lockbox**
>
> Locks all your traffic history, notes, and Repeater tabs with password protection so no adversary can spy on your work.

Section	Function in OpenSec Studio	Metaphor to understand it
Save Project (.opensec)	Serializes the entire workspace into an encrypted file.	Locking all evidence inside the vault.
AES-256 Encryption	Guarantees confidentiality for enterprise audit data.	The unbreakable combination lock.

> 🕵️ **Detective Mission 16: Encrypt Your Investigation**
>
> Select "Save Project (.opensec)" from the top menu, assign a master passphrase, and inspect the created file.

Capítulo 17: The Extension & Tool Store (BApp Community Store)

Modular extension ecosystem allowing community security plugins to be installed or created in JSON format.

> 🧩 **The detective accessory shop**
>
> Where you equip your backpack with new gadgets: special flashlights, decoders, or radar sensors.

Section	Function in OpenSec Studio	Metaphor to understand it
1-Click Install	Dynamically enables or disables plugins.	Snapping an accessory onto your utility belt.
Load Local Plugins	Imports custom JSON extensions developed by your team.	Crafting your own gadget in the workshop.

> 🕵️ **Detective Mission 17: Browse the Plugin Store**
>
> Navigate to the Plugins tab, review available community tools, and enable an extension to enhance your workflow.

Capítulo 18: SSL Certificates, 60-Day Trial, $30 BTC Donation & Credits

Root X.509 certificate management for HTTPS interception, 60-day continuous evaluation, and Bitcoin donation radar.

> 🛡️ **The diplomatic trust passport and honor plaque**
>
> The certificate is your diplomatic passport telling the browser: "Trust this officer, he is here to defend you".

Section	Function in OpenSec Studio	Metaphor to understand it
CA Root Certificate	Generates and installs trust certificates to inspect HTTPS without warnings.	The detective official wax seal.
60-Day Evaluation Period	60 days of full unrestricted access protected by deep multi-anchor persistence.	Your two-month courtesy pass to explore the realm.
Bitcoin $30 USD Donation	Support independent software with live mempool payment detection.	Your contribution to the digital detectives guild.
Authorship & Credits	Designed and crafted with pride by el saghet.	The artisan mark engraved into the tool.

> 🕵️ **Detective Mission 18: The Official Honor Badge**
>
> Open the About OpenSec Studio modal and view the official badge: Developed by el saghet • Version v1.10.10 Official 2026.
